I. 次の英文を読んで設問に答えなさい。

Many people believe that Japanese food is good for the health and the key to slimming down. And they are right. The Japanese diet is based on fish, which has less far and therefore fewer calories than meat. For example, a typical Japanese breakfast usually consists of a bowl of rice, a cup of miso soup with fish-seasoning (the fish broth), baked or broiled fish, and egg(s). If you stay at a traditional Japanese inn, a "ryokan," this is what you will probably be served for breakfast.

The meaning of "dieting" in Japanese is not exactly the same as it is in English. For young Japanese women especially, being on a diet may mean skipping meals or even not eating at all. This comes from the belief that the act of eating itself is the main cause of gaining weight.

In contrast, the American idea of "dieting" is quite different. Many Americans claim that eating as much as they want is an important part of life, and they work out to burn off the excess calories they consume. That's why so many exercise programs such as jazzercise have been developed in the United Sates.

For many Americans, eating less or skipping meals is not a big priority. Moreover, Americans are well known for having a "sweet tooth."

(A) According to the U.S. Census bureau, consumption of candy in the United States rose by two pounds per person in 2006 compared with 2001. As long as "eating as much as you want" sounds appealing, Americans will easily fall victim to eating disorders like overeating, which often lead to obesity.

Of course, simply $_{(B)}$ not eating is not the best solution to losing weight and avoiding obesity, either. A balanced diet and regular exercise is the best recommendation.
