8 次の英文を読んで問いに答えなさい。

(有明高専 H24)

Did you ever swim in the ocean? Did you ever get sea water in your mouth? Then you know why we can't drink it. Sea water is salt water. It is not good for drinking or for watering plants.

The oceans have so much water in them. But there are people all over the world who do not have (ア) water. Everyone needs (イ) water. ① Americans use [as / water / times / much / as / six] they did 50 years ago. They use more and more water all the time—in their homes, on their farms, and in their *workshops.

But people need fresh water, not salt water. Sea water can be used if it has no salt in it. People all over the world will use sea water without its salt. If we can use sea water, everyone will have enough water ② () last.

Scientists know how to get fresh water from sea water. They know many ways of taking out the salt. One way is to boil the salt water. As the water boils, the steam rises. It has no salt in ③ it. When it cools, it becomes fresh water.

Another way is to use the heat of the sun. A plate ④ (cover) with glass is used. The sun warms the sea water. The steam rises and cools on the glass. The steam which cools on the glass is fresh water.

(ウ) way is to freeze the sea water. The salt goes to the outside of the ice and stays there. Then the salt can be washed off the ice. The ice is fresh water.

Are all these ways good? Yes, they are. Then why don't we have fresh water for people who need it? ⑤ The answer is that someday we will. Now ⑥ it is too expensive to get fresh water in these ways. Most people can't pay for it.

Scientists are still looking for much ⑦ (good) ways. Some day everyone may drink fresh water that comes from the salty sea.
